Payex Bank Debit	12
PayEx Manual Autopay Payments	14
PayEx Invoice Payments	17
How to activate Transaction Callback	18
How to translate the modules	19

Prerequisite

Php extension:

Soap

Installation

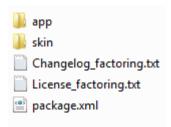

We can only guarantee that the modules work on magento version 1.7.0.0 to 1.9.*. We can only guarantee that the module works with the standard checkout of Magento.

For general questions regarding installations please contact $\underline{support.solutions@payex.com} \; .$

Step 1: Transferring the modules over to your FTP/SFTP location

Set your ftp/sftp client transfer type to binary.

First you need to unzip the modules from the original zip file to your computer, sometimes there are two layers of archived files, unzip them so you have the files looking like this on your computer:

Now transfer them over to the root of your magento site using FTP/SFTP, the root is usually the public_html folder. The files will then migrate automatically to the appropriate location in your magento application. If the ftp-client complains of over written xml-files, it is nothing to worry about.

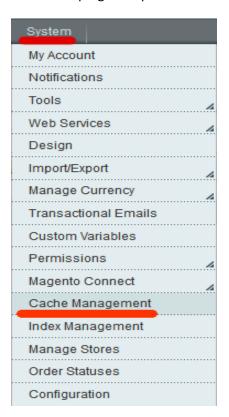

Step 2:

Sign in to magento as Administrator, http://yoursite.com/admin or http://yoursite.com/index.php/admin

Step 3:

Click the top right drop down menu called "system" and click "cache management".

Then click the box for "configuration" and then submit to refresh.

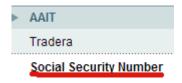

The installation is complete, now you need to configure the modules.

Activating getaddress module

Sign in as admin on your site and click system->configuration

In the left menu find Social Security Number

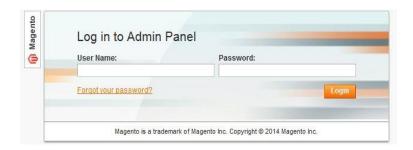

Insert the appropriate account number and encryption key.

Set "Enable test mode" to no if you want it in live/production mode.

Configuration

Sign in to magento as Administrator, http://yoursite.com/admin or http://yoursite.com/index.php/admin

To configure the modules go to the "system" menu and click "configuration" in the bottom. This expands a margin on the left hand side.

On the left hand side in the margin find under "Sales" where it says "payment methods" and click it

Here you can configure the different modules:

PayEx Payments

PayEx Factoring

PayEx Bank Debit

PayEx Manual Autopay Payments

PayEx Invoice Payments

Payex Payments

Payex Payments		
Enabled	Yes	•
Title	Payex Payments	
Payment Type	Payment Menu	•
Payment to applicable countries	All Allowed Countries	•
Payment to Specific countries	Afghanistan	A
	Åland Islands	
	Albania	
	Algeria	
	American Samoa	
	Andorra	
	Angola	
	Anguilla	
	Antarctica	
	Antigua and Barbuda	+
Enable test mode	Yes	•
Account Number		
Encryption Key		
Transaction Type	Authorize	•
Order status (for authorize)	Processing	•
Order status (for capture)	Complete	•
Client language	English	•
Time to clean pending orders (0 - disabled)	20	
Enable Responsive Skinning	Yes	•

Enabled: Yes if enabled, no if disabled

Title: Name of the module

Payment type: Which type of payment model you would like to use

Payment to applicable countries: Payment differences in different countries

Payment to Specific countries: Change the countries to the specific payment model

Enable test mode: Set "Yes" if you are testing (if you are testing remember to use PayEx testaccount)

Account Number: You can collect the account number in Payex Merchant Admin; for production mode: https://secure.payex.com/Admin/Logon.aspx and for test mode: http://test-secure.payex.com/Admin/Logon.aspx Remember there are different account numbers for test and production mode. For more info contact PayEx support.solutions@payex.com

Encryption Key: The encryption key you get in Payex Merchant Admin (Choose md5). Remember there are different encryption keys for test and production mode For more information contact PayEx support support.solutions@payex.com.

To generate an encryption key

Step 1:

you must go to $\underline{\text{http://www.payexpim.com/}} \text{ and choose admin for either test or production environment.}$

PAYEX ADMIN (Prod) https://secure.payex.com/Admin/ — PayEx transaction administration in production environment.

PAYEX ADMIN (Test) http://test-secure.payex.com/Admin/ — PayEx transaction administration in test environment.

Step 2:

Sign in with the information you have been given by payex

Welcome to PayEx Merchant A	dmin
Username	
Password	

Step 3: In the margin on the left, find "Merchant" and click on "Merchant profile"

Merchant_	
Merchant configuration	
Merchant profile	
Merchant access list	

Step 4:

Click on "new encryption key"

And save when you've written down the key

Complete

Transaction Type: Authorize is the standard transaction type, it requires a capture of the order. With Sale the amount ordered is processed immediately and withdrawn from the customers card. For more info contact PayEx support support.solutions@payex.com

Order status (for authorize): The status the order should have when amount has been reserved from customer but not yet captured

Order status (for capture): Status after order has been captured

Client language: Language displayed to customer

Time to clean pending orders (0 - disabled): After this time the order will be canceled if user have not payed before that

Enable Responsive Skinning: enables the module to be used on smart phones.

Don't forget to activate transaction callback in PayEx Merchant Admin

Don't forget to activate <u>transaction callback</u> in PayEx Merchant Admin

How to activate Transaction Callback

Transaction callback is an extra process used by PayEx to verify that the webshop is informed of the result of the payment processing. It is useful if your server goes down during payment or if customer close the webbrowser or lose connection just after payment. Callback is a required functionality.

Payex test-test-test-test-test !!!!!

Use the following URL

http://shop.com/index.php/payexapi/payexapi/transactions

Change shop.com for your shop's url

How to translate the modules

Log in to your site using ftp/sftp and go to /app/locale/en_US/ The app folder should be in the root of your site(that's usually public_html).

In the en_US folder you should find the modules csv files called: AAIT_Bankdebit.csv, AAIT_Payex2.csv, AAIT_Payexautopay.csv and AAIT_Payexinvoice.csv

Now translate the corresponding sentences/words that are within the ""

example: "The customer was redirected to PayEx.", "The customer was redirected to PayEx."_

Translated(Swedish) version: "The customer was redirected to PayEx.", "Kunden skickades till PayEx."
